2.5 SV680N servo driver

The SV680N series servo driver is a high-end servo drive designed based on global leading standards and high-end application needs. It is featured with high speed, high precision, high performance, and tuning-free function. Covering a power range from 0.05kW to 7.5kW, the SV680N series servo driver carries EtherCAT communication interfaces to work with the host controller for a networked operation of multiple servo drivers. It is equipped with the latest ITune function that allows adaptive stiffness level setting, inertia auto-tuning, and vibration suppression for easy control. The SV680N series servo driver, together with an MS1 series high response servo motor (with ultra-low, low or medium inertia) equipped with a 26-bit single-turn/multi-turn absolute encoder, aims to deliver a quiet and stable operation and accurate process control through the fully closed-loop function and internal process segment function.
